Dimensions:	
Width between axles:	550mm
Hight:	980mm
Depth: (folded seat):	540mm

Seat especially designed for conference halls, theatres and auditorium.

Seat and backrest made of beech plywood, 12mm thick, and finished with 2 layers of polyurethane varnish.

Upholstery is made of open-cell polyurethane foam (self-extinguishable according to legal prescriptions), covered with M-1 fireproof fabrics with an additional underlying M-1 layer —shade to be chosen by the customer.

Backrest is fixed to the set by means of two side components made of extruded aluminium. Thus, the row achieves

uniformity and firmness.

Sidearms also enclose the folding socket joints, which allow the seat pan to fold by means of a spinning axle and a torsion spring, determining the automatic reversion.

Joints made of injected polyamide, very resistant to mechanical demands, and do not require maintenance.

Fixing to the floor is achieved by means of a steel plate support, 10mm thick, onto which the sidearm is anchored.

Every support has two orifices for its fixation to the pavement.
